

What Is the Site's Role?

Introduction & Education

Site staff introduce the Mentor Program, explain its purpose and voluntary nature, and provide the participant with the official program materials and access link.

Support

Site staff may assist participants with basic access questions but do not provide technical support beyond basic troubleshooting.

Participation in the Mentor Program is voluntary and does **not** affect trial care in any way.

This Program Is Made Possible By

LEVERAGING PEER SUPPORT FOR CLINICAL TRIAL ENGAGEMENT

TRIAL PARTICIPANTS CAN FIND SUPPORT FROM OTHERS WHO HAVE "BEEN IN THEIR SHOES"

The PatientPartner Mentor Program pairs trial participants with experienced peers who offer relatable support, helping them feel informed, confident, and motivated throughout the study.

What Does A Mentor Do?

Mentors share their personal journey with their condition and clinical trial participation in a way that provides perspective and understanding to others. Their role is to listen, share their experience, and help others feel supported as they navigate their trial journey. Mentors support trial participants by:

- Offering emotional support and understanding
- Sharing personal experience living with their disease and diagnosis
- Describing what it was like to participate in a clinical trial, from their perspective
- Helping others feel less alone as they move through their own journey

This peer-based connection helps participants feel understood and empowered, while supporting overall trial satisfaction and retention.

Mentors and participants may connect throughout the trial, especially in advance of key study visits. All interactions take place on a secure, compliant platform designed to protect participant confidentiality and safety while minimizing site workload.

How Will Sites Work With PatientPartner?

PatientPartner will work closely with study sites to ensure clear understanding of the program, defined escalation pathways, and alignment on key participant touchpoints. Below are several ways we partner with sites throughout implementation and ongoing execution.

- Training on the program and tips for introducing it to participants
- Providing feedback and analysis of patient sentiment, common trends related to patient satisfaction, motivation and concerns
- Escalation activities related to drop-out, safety or compliance risks

Site Workflow and Introduction of the Mentor Program to Trial Participants

How Participants Engage With a Mentor

1. Introduction at Site Visit:

Eligible participants are introduced to the Mentor Program during a study visit. Participation is voluntary.

2. Secure Enrollment

Interested participants access a secure link to provide consent and complete a short matching questionnaire.

3. Relatable Matching

Participants are paired with a trained mentor using PatientPartner's proprietary matching algorithm based on clinical, behavioral, and personal factors.

4. Ongoing Connection

Once matched, mentors and participants can chat at any point throughout the trial.

5. Secure Communication and Escalation

All communications occur within a secure platform. Any concerns (AEs, withdrawal risk, etc) are escalated per sponsor and site procedures.

What Is the Site's Role?

PatientPartner will work closely with study sites to ensure clear understanding of the program, defined escalation pathways, and alignment on key participant touch points. Below are few ways we partner with sites throughout implementation and ongoing execution.

- Training on the program and tips for introducing it to participants
- Providing feedback and analysis of patient sentiment, common trends related to patient satisfaction, motivation and concerns
- Escalation activities related to drop-out, safety or compliance risks

A single point of contact from PatientPartner will be provided, and ongoing program feedback is encouraged.

Site Workflow and Introduction of the Mentor Program to Trial Participants

How Do Trial Participants Engage With a Mentor?

- Participation in the Mentor Program is completely voluntary
- Eligible participants are introduced to the program during a site visit
- Interested participants access a secure PatientPartner link to:
 - Provide consent
 - Complete a brief questionnaire

Using PatientPartner's proprietary matching algorithm, participants are paired with a mentor based on relevant psychological, behavioral, and clinical factors.

Once matched, the mentor will reach out to begin the connection. The participant controls how often they engage.

All communication happens within the secure platform, and any concerns (such as adverse events or risk of withdrawal) are escalated according to Sponsor and Site procedures.
